- Completed
- 

## PROJECTS

### Android

#### Smart Cutter

It shows mobile companies and its brands and its connected to craft cutting plotter the app is connected to the device to cut the covers of these models and print it through the device

---

### Flutter

#### Mecca High Feed for Poultry, Benisuef Al Gadida

Des: An application is made for a factory of Feed and poultry and its main functionality is:

- To make agents dealing with the factory know the loading status of their cars and these are:

(**didn't load, loading and loaded**) with each status they got a notification with details in the notification these details contains of the status and the car number,

(**This notification is pushed only when his car has arrived the factory and when it leaves only**).

- In this app we have made that the agent can order from the factory whatever he needs and this order can be edited and deleted from a table shows all his orders.

- This agent can scan any bag of his merchandise by using **barcode** or **QR** code to know all the details of his bags that he bought from the factory.

- The agent can open any screen in the app using his voice only to make it easier for them because some of them are not educated

- The agent can filter all what he bought from the factory by date **from – to** with the name of the product

- The agent can see in the app the orders he requested from a specific section made for him and it contains all the data he needs to know about his order

---

### ADOODLZ

Des: Adoodlz is a goal-oriented platform that gives plenty of options either you want to make money by visiting websites or sharing advertising content.

- An immediately accessible way to make money online, by sharing posts on social media

<https://github.com/AmrAshraf-dev/adoodlz-repo>

---

### **Saferoad (technician app)**

#### **It's customized to Saferoad company**

- This app is like an admin to help employees in the company to post their data by using scan QR & Barcode and all of their devices data they want to enter to the system to organize their work inside the application

---
